

Figure 2c. Map showing surface evidence for faulting in the Yuha Basin quadrangle. The faults shaded in blue and the annotations underlined in blue are by the author; the rest is by Clark (1978).

Fault. Solid line represents a well-located trace, dashed line represents an approximately-located trace, and dotted line represents a buried trace, queried where existence of the trace is uncertain. The bar-and-ball symbol indicates an apparent vertical offset (such as a scarp). The ball represents the downthrown side. The numbers next to the fault indicate scarp height in meters.
